

RIGEL Business

Kilo Code Fix Instructions

Version 2 — Complete instruction set: all modules

Stella Lumen (Pty) Ltd | ICT Department | Thabani Zulu (Lead Developer)

Field	Details
Document Type	Kilo Code Fix Instruction Set v2 — New Modules
New Modules	Registration, Transact, Cash Book, Customers, Directors, Employees, Inventories, Assets, Projects, Adjustments
Prior Modules	Suppliers, Investments, Loans — see RIGEL_Kilo_Code_Fix_Instructions.docx (v1)
VS Code Extension	Kilo Code Extension — paste each instruction block as a Kilo Code prompt
Classification	Confidential — Stella Lumen Internal Document

How to use this document:

1. Locate the Test ID row you are working on.
2. Copy the full text from the Kilo Code Instruction column.
3. Paste it into the Kilo Code Extension in VS Code as the instruction prompt.
4. Apply the fix, test locally (python rigel_trial_win.py), then tick the ☐ checkbox.

Status legend: Pending = not yet tested (record Pass or Fail after testing)

Pass = confirmed working | Fail = fix required | Deferred = CFS/future module

IMPORTANT: For modules not yet tested, run through each test manually first.

Record the actual result (Pass/Fail) before implementing any fixes.

Refer to RIGEL_Kilo_Code_Fix_Instructions.docx for Suppliers, Investments, and Loans test IDs.

Shared fix reminder: The CCE (Cash & Cash Equivalents) cumulative update in rigel_core.py update_cce() is a root cause fix shared across: Suppliers Inventory/Fixed Assets, Investments, Loans, Inventories, Assets, Directors (Loan to Director), and Customers (Account Payment).

Fix update_cce() in rigel_core.py ONCE before addressing individual module Test IDs.

See RIGEL_Kilo_Code_Fix_Instructions.docx Section 1 for the full shared fix instruction.

1. Kilo Code Instructions — Registration Module

Source files: [registration/registration_handler.py](#), [reporting/income_statement.py](#), [reporting/balance_sheet.py](#), [reporting/afs_notes.py](#)

These tests must all pass before any transactional module testing begins. Registration is the foundation of all financial data.

☐	Test ID	Module	Status	Kilo Code Instruction
☐	REG-001	Registration	Pending	Test ID: REG-001 Module: Registration Expected behaviour: Clicking 'Register Company' on the main dashboard navigates to the Registration page without errors. Current behaviour: Not yet tested. Files to check: registration/registration_handler.py, transact/navigation.py Fix required: Confirm button is bound to the correct route/function. Verify page loads with all form fields visible and no errors.
☐	REG-002	Registration	Pending	Test ID: REG-002 Module: Registration Expected behaviour: All grey-shaded cells on the Registration page are editable and accept user input. Current behaviour: Not yet tested. Files to check: registration/registration_handler.py Fix required: Confirm cell protection is applied only to non-grey cells. Grey cells must be unprotected and accept all valid input types.
☐	REG-003	Registration	Pending	Test ID: REG-003 Module: Registration Expected behaviour: All white-background cells on the Registration page are locked and cannot be edited. Current behaviour: Not yet tested. Files to check: registration/registration_handler.py Fix required: Confirm white cells are protected. Clicking them should produce no editable state — no error dialog should appear.
☐	REG-004	Registration	Pending	Test ID: REG-004 Module: Registration Expected behaviour:

☐	Test ID	Module	Status	Kilo Code Instruction
				The registered entity name is displayed consistently on every system page from the Main Menu onwards. Updating the name on the Registration page propagates to all pages. Current behaviour: Not yet tested. Files to check: registration/registration_handler.py, transact/navigation.py Fix required: - Store entity name in a shared application state variable on registration. - All page headers and banners must read from this shared state. - On update: refresh all open pages to reflect the new entity name.
☐	REG-005	Registration	Pending	Test ID: REG-005 Module: Registration Expected behaviour: 'Update Last Year' executes correctly and populates prior-year opening balances into the correct fields across IS, BS, and comparative columns. Current behaviour: Not yet tested. Files to check: registration/registration_handler.py, reporting/income_statement.py, reporting/balance_sheet.py Fix required: - Confirm 'Update Last Year' reads the current year closing balances. - Writes them to the Last Year column in IS and BS. - Does not overwrite the current year data. - Confirm comparative columns display correctly after update.
☐	REG-006	Registration	Pending	Test ID: REG-006 Module: Registration Expected behaviour: Clicking each Category dropdown on the Registration page reveals the correct sub-category options as defined in the RIGEL Chart of Accounts. Current behaviour: Not yet tested. Files to check: registration/registration_handler.py Fix required: Confirm dropdown data source maps correctly to the RIGEL COA. Each category must reveal only its valid sub-categories. No missing or extra options.
☐	REG-007	Registration	Pending	Test ID: REG-007 Module: Registration Expected behaviour: Clicking each sub-category reveals the correct account options per the RIGEL COA. Selecting an account auto-fills the GL account code.

☐	Test ID	Module	Status	Kilo Code Instruction
				Current behaviour: Not yet tested. Files to check: registration/registration_handler.py Fix required: Confirm account dropdown is driven by the selected sub-category. GL account code must auto-populate on account selection.
☐	REG-008	Registration	Pending	Test ID: REG-008 Module: Registration Expected behaviour: Clicking 'Post' adds the transaction to the right-hand table immediately with all correct columns: Category, Sub-Category, Account, Amount. Current behaviour: Not yet tested. Files to check: registration/registration_handler.py Fix required: Confirm post() method appends the new row to the display table and saves to the registration data store. Table must refresh immediately after posting.
☐	REG-009	Registration	Pending	Test ID: REG-009 Module: Registration Expected behaviour: Selecting an existing posting and clicking 'Edit' populates the form for amendment. Clicking 'Post' again updates the record — no duplicate is created. Current behaviour: Not yet tested. Files to check: registration/registration_handler.py Fix required: a. 'Edit' must load the selected record's values into the form fields. b. On 'Post': check if this is an update (existing ID) vs a new record. c. Update the existing record in place — do not append a duplicate.
☐	REG-010	Registration	Pending	Test ID: REG-010 Module: Registration Expected behaviour: If the user attempts to post a record with the same Category, Sub-Category, and Account as an existing entry, the system alerts the user and does NOT create a duplicate. Current behaviour: Not yet tested. Files to check: registration/registration_handler.py

☐	Test ID	Module	Status	Kilo Code Instruction
				Fix required: - Before post(), query existing records for a matching (category, sub-category, account) combination. - If found: display an error dialog — "This account has already been posted. Select 'Edit' to update the existing entry." - Abort the post. Do not write a duplicate.
☐	REG-011	Registration	Pending	Test ID: REG-011 Module: Registration Expected behaviour: Clicking 'Start Using' navigates to the Main Menu page. This button should only be enabled after all mandatory registration fields are completed. Current behaviour: Not yet tested. Files to check: registration/registration_handler.py, transact/navigation.py Fix required: Confirm button routes to the Main Menu. Add validation: disable the button until all mandatory fields (entity name, at least one registered account) are completed.
☐	REG-012	Registration	Pending	Test ID: REG-012 Module: Registration Expected behaviour: The 'Registration' button on the Main Menu navigates back to the Registration page. Current behaviour: Not yet tested. Files to check: transact/navigation.py Fix required: Confirm the 'Registration' menu button routes to the Registration page correctly.
☐	REG-013	Registration	Pending	Test ID: REG-013 Module: Registration Expected behaviour: All Revenue and Expenditure amounts from the Registration table appear under the 'Last Year' column of the Income Statement in the correct account lines. Current behaviour: Not yet tested. Files to check: registration/registration_handler.py, reporting/income_statement.py Fix required: - After registration, IS must read Last Year column values from the registration data store. - Each revenue/expenditure account must appear on the correct IS line (based on COA mapping). - Confirm all accounts are present and none are missing.
☐	REG-014	Registration	Pending	Test ID: REG-014 Module: Registration

☐	Test ID	Module	Status	Kilo Code Instruction
				Expected behaviour: Net Income After Tax from the IS flows automatically to Retained Earnings in the BS. No manual entry is required. Current behaviour: Not yet tested. Files to check: reporting/income_statement.py, reporting/balance_sheet.py Fix required: Confirm IS Net Income After Tax cell reference links directly to the BS Retained Earnings field. The linkage must be automatic — not a manual copy.
☐	REG-015	Registration	Pending	Test ID: REG-015 Module: Registration Expected behaviour: All Asset, Liability, and Equity balances from the Registration table appear in the 'Last Year' column of the BS in the correct account lines. Current behaviour: Not yet tested. Files to check: registration/registration_handler.py, reporting/balance_sheet.py Fix required: Same as REG-013 but for BS. Confirm every registered balance appears on the correct BS line under the Last Year column.
☐	REG-016	Registration	Pending	Test ID: REG-016 Module: Registration Expected behaviour: Asset and Liability balances aggregate correctly to Retained Earnings in the BS, following the RIGEL COA structure. Current behaviour: Not yet tested. Files to check: reporting/balance_sheet.py Fix required: Confirm BS aggregation logic: Total Assets = Total Equity + Total Liabilities. Retained Earnings = Total Equity minus Share Capital. Verify the aggregation formula in balance_sheet.py.
☐	REG-017	Registration	Pending	Test ID: REG-017 Module: Registration Expected behaviour: The Balance Sheet balances: Total Assets = Total Equity and Liabilities. Any imbalance after registration is a critical error that must be surfaced immediately. Current behaviour: Not yet tested. Files to check: reporting/balance_sheet.py

☐	Test ID	Module	Status	Kilo Code Instruction
				Fix required: a. Add a BS balance check function: <code>assert total_assets == total_equity_and_liabilities</code>. b. If the check fails: display a prominent error to the user — "Balance Sheet is out of balance. Please review your registration entries." c. Do not allow the user to proceed to transactions until the BS balances.
☐	REG-018	Registration	Pending	Test ID: REG-018 Module: Registration Expected behaviour: - No errors appear in the AFS Current Year after registration. - All fields behave as expected with no formula errors, blank fields, or incorrect cross-references. Current behaviour: Not yet tested. Files to check: <code>reporting/afs_notes.py</code>, <code>reporting/income_statement.py</code>, <code>reporting/balance_sheet.py</code> Fix required: Run a full AFS review after registration. Check all IS, BS, and Notes pages for: blank fields where a value is expected, formula/calculation errors, cross-reference mismatches between IS and BS. Fix any identified issues.

2. Kilo Code Instructions — Transact Module

Source files: `transact/navigation.py`, `reporting/dashboard.py`, `auth/session.py`
Navigation tests must pass before any module-specific testing begins.

☐	Test ID	Module	Status	Kilo Code Instruction
☐	TRN-001	Transact	Pending	Test ID: TRN-001 Module: Transact Expected behaviour: Clicking the 'Transact' button from any screen navigates to the Main Menu page immediately. Current behaviour: Not yet tested. Files to check: <code>transact/navigation.py</code> Fix required: Confirm 'Transact' button is bound to the Main Menu route. No loading errors or blank pages should occur.
☐	TRN-002	Transact	Pending	Test ID: TRN-002 Module: Transact Expected behaviour: Every button on the Left Menu and Bottom Menu navigates to its respective page, including CFS and Management

☐	Test ID	Module	Status	Kilo Code Instruction
				Accounts. No button leads to an error or blank page. Current behaviour: Not yet tested. Files to check: transact/navigation.py Fix required: - Audit all Left Menu and Bottom Menu buttons for correct route bindings. - Confirm CFS page exists and is accessible. - Confirm Management Accounts page exists and is accessible. - Fix any broken or unbound buttons.
☐	TRN-003	Transact	Pending	Test ID: TRN-003 Module: Transact Expected behaviour: All graphs on the dashboard and module pages update correctly after transactions are posted. No graph should display stale data. No manual refresh required. Current behaviour: Not yet tested. Files to check: reporting/dashboard.py Fix required: - Confirm that every post() call in every module triggers a dashboard refresh (self.refresh_dashboard()). - Check all graph data bindings — each graph must read from the live data store, not a cached snapshot. - Test: post a transaction, then immediately view the relevant graph. The new data must appear.
☐	TRN-004	Transact	Pending	Test ID: TRN-004 Module: Transact Expected behaviour: Clicking 'Logout' exits the user from the system cleanly. Session is cleared. User is returned to the login/splash screen. Current behaviour: Not yet tested. Files to check: transact/navigation.py, auth/session.py Fix required: Confirm logout clears all session state (user object, open records, unsaved data warnings). Route to login/splash screen after logout.

3. Kilo Code Instructions — Cash Book Module

Source files: [cashbook/cashbook_handler.py](#), [rigel_core.py](#), [reporting/trial_balance.py](#), [reporting/balance_sheet.py](#)

☐	Test ID	Module	Status	Kilo Code Instruction
☐	CB-001	Cash Book	Pending	Test ID: CB-001 Module: Cash Book Expected behaviour: Only blue-highlighted cells are editable on the Cash Book page. All other cells are locked. Current behaviour: Not yet tested. Files to check: cashbook/cashbook_handler.py Fix required: Confirm cell protection. Blue cells must be unprotected. All other cells must be locked without error dialogs on click.
☐	CB-002	Cash Book	Pending	Test ID: CB-002 Module: Cash Book Expected behaviour: The Opening Bank Balance entered on the Cash Book page correctly impacts the Balance Sheet: Cash & Cash Equivalents increases. Retained Earnings is adjusted if applicable. Current behaviour: Not yet tested. Files to check: cashbook/cashbook_handler.py, reporting/balance_sheet.py Fix required: a. On entry of Opening Bank Balance: post Dr Cash & Cash Equivalents. b. Credit: Retained Earnings (or Owner's Equity, per RIGEL COA design). c. Confirm BS updates immediately and TB balances.
☐	CB-003	Cash Book	Pending	Test ID: CB-003 Module: Cash Book Expected behaviour: The Opening Bank Balance field should be automatically populated from the Last Year closing bank balance stored in the Registration module. This eliminates manual re-entry and transcription errors. Current behaviour: Not yet tested — this is an enhancement recommendation. Files to check: cashbook/cashbook_handler.py, registration/registration_handler.py Fix required: a. On Cash Book page load: read the Last Year closing Cash & Cash Equivalents balance from the registration data store.

☐	Test ID	Module	Status	Kilo Code Instruction
				b. Pre-populate the Opening Bank Balance field with this value. c. Allow the user to override if needed.
☐	CB-004	Cash Book	Pending	Test ID: CB-004 Module: Cash Book Expected behaviour: Last Year closing balances from Registration automatically become Current Year opening balances in the Balance Sheet. No manual carry-forward is required. Current behaviour: Not yet tested. Files to check: registration/registration_handler.py, reporting/balance_sheet.py Fix required: Confirm the BS 'Opening Balance' column reads from the Registration Last Year data. This should be an automatic linkage — not a manual paste or re-entry.
☐	CB-005	Cash Book	Pending	Test ID: CB-005 Module: Cash Book Expected behaviour: Evaluate whether the Document Number field on the Cash Book page is required. If not required for this release, deactivate or hide it to simplify the UI. Current behaviour: Not yet tested — this is a design decision. Files to check: cashbook/cashbook_handler.py Fix required: Discuss with lead developer: is Document Number required for this release? If no: hide the field from the UI (do not delete the underlying data field). If yes: confirm it is mandatory and validated.
☐	CB-006	Cash Book	Pending	Test ID: CB-006 Module: Cash Book Expected behaviour: All Cash Book entries post correctly to: - General Ledger (correct debit/credit columns) - Trial Balance (correct account lines) - Balance Sheet (Cash & Cash Equivalents updated) - All related reports Current behaviour: Not yet tested. Files to check: cashbook/cashbook_handler.py, rigel_core.py, reporting/trial_balance.py, reporting/balance_sheet.py Fix required: Trace a sample cash receipt and cash payment through the full posting chain. Confirm all four destinations update correctly. Fix any missing or incorrect postings.

4. Kilo Code Instructions — Customers Module

Source files: customers/customer_handler.py, customers/masterfile.py, rigel_core.py, reporting/*.py

☐	Test ID	Module	Status	Kilo Code Instruction
☐	CUS-001	Customers	Pending	Test ID: CUS-001 Module: Customers Expected behaviour: Only grey-shaded cells are editable on the Customer Transactions page. All other cells are locked. Current behaviour: Not yet tested. Files to check: customers/customer_handler.py Fix required: Confirm cell protection layout. Grey cells editable; all others locked silently.
☐	CUS-002	Customers	Pending	Test ID: CUS-002 Module: Customers Expected behaviour: 'Account Payment' is available and selectable from the Nature of Transaction dropdown. Selecting it enables the relevant form fields for customer payment entry. Current behaviour: Not yet tested. Files to check: customers/customer_handler.py Fix required: Confirm 'Account Payment' appears in the Nature of Transaction dropdown. On selection, the appropriate fields (Customer, Amount, Date, Description) become editable.
☐	CUS-003	Customers	Pending	Test ID: CUS-003 Module: Customers Expected behaviour: Upon clicking 'Post Transaction', the account payment posts to View Transactions with all correct columns: Date, Code, Customer Name, Description, Amount, Category. Current behaviour: Not yet tested. Files to check: customers/customer_handler.py Fix required: Confirm post() writes to View Transactions with all required column values. The record must appear immediately after posting.
☐	CUS-004	Customers	Pending	Test ID: CUS-004 Module: Customers Expected behaviour:

☐	Test ID	Module	Status	Kilo Code Instruction
				A unique transaction code is auto-generated for each posted customer transaction (e.g., CUS-2026-0001). No duplicates permitted. Current behaviour: Not yet tested. Files to check: customers/customer_handler.py Fix required: Confirm unique code generation. Add a uniqueness check before saving.
☐	CUS-005	Customers	Pending	Test ID: CUS-005 Module: Customers Expected behaviour: Account Payment posts correctly to the TB: - Dr Cash & Cash Equivalents (increases) - Cr Trade Receivables (decreases) TB balances after posting. Current behaviour: Not yet tested. Files to check: customers/customer_handler.py, rigel_core.py, reporting/trial_balance.py Fix required: Confirm both TB legs post. Verify TB balance after posting a sample account payment.
☐	CUS-006	Customers	Pending	Test ID: CUS-006 Module: Customers Expected behaviour: Account Payment posts correctly to the BS: - Cash & Cash Equivalents increases - Trade Receivables decreases Net Working Capital effect is zero (one current asset up, one current asset down). Current behaviour: Not yet tested. Files to check: reporting/balance_sheet.py Fix required: Confirm BS updates correctly after an account payment posting.
☐	CUS-007	Customers	Deferred	Test ID: CUS-007 Module: Customers Expected behaviour: Movement in Trade Receivables from Account Payments is accounted for in the Cash Flow Note under Operating Activities (changes in working capital). Status: DEFERRED — CFS module not yet built.

☐	Test ID	Module	Status	Kilo Code Instruction
				Fix required: None at this stage. When CFS is built, ensure Account Payments appear as Trade Receivables movements in the Operating Activities working capital note.
☐	CUS-008	Customers	Pending	Test ID: CUS-008 Module: Customers Expected behaviour: All customer account payments post to the GL in the correct debit/credit columns with correct date, code, description, and amount. Current behaviour: Not yet tested. Files to check: rigel_core.py Fix required: Trace a sample account payment to the GL. Confirm Dr Cash and Cr Trade Receivables both appear with correct values.
☐	CUS-009	Customers	Pending	Test ID: CUS-009 Module: Customers Expected behaviour: Customer deposits post to the Customer Masterfile against the correct customer in the correct month with the correct minus effect on the outstanding balance. Current behaviour: Not yet tested. Files to check: customers/masterfile.py Fix required: Confirm that when a deposit is posted for a customer, the Masterfile record for that customer shows the deposit reducing their outstanding balance in the correct month column.
☐	CUS-010	Customers	Pending	Test ID: CUS-010 Module: Customers Expected behaviour: 'Receive Deposit' is available and selectable from the Nature of Transaction dropdown. Current behaviour: Not yet tested. Files to check: customers/customer_handler.py Fix required: Confirm 'Receive Deposit' appears in the dropdown. On selection, the form enables the deposit entry fields.
☐	CUS-011	Customers	Pending	Test ID: CUS-011 Module: Customers Expected behaviour: Deposit posts correctly to: - View Transactions (all columns) - TB: Dr Cash / Cr Customer Deposits Received (Liability)

☐	Test ID	Module	Status	Kilo Code Instruction
				- BS: Cash increases; Customer Deposit Liability increases Deposits must NOT reduce Trade Receivables. Current behaviour: Not yet tested. Files to check: customers/customer_handler.py, rigel_core.py Fix required: - Confirm the Deposit category posts to Customer Deposits Received (a Liability), not to Trade Receivables. - Confirm Cash increases and the Liability increases. - Confirm Trade Receivables is not affected.
☐	CUS-012	Customers	Pending	Test ID: CUS-012 Module: Customers Expected behaviour: 'Refund Deposit' is available and selectable from the Nature of Transaction dropdown. Current behaviour: Not yet tested. Files to check: customers/customer_handler.py Fix required: Confirm 'Refund Deposit' appears in the dropdown. On selection, the form enables the refund entry fields.
☐	CUS-013	Customers	Pending	Test ID: CUS-013 Module: Customers Expected behaviour: Refund posts correctly to: - View Transactions - TB: Dr Customer Deposits Received (Liability) / Cr Cash - BS: Cash decreases; Customer Deposit Liability decreases Current behaviour: Not yet tested. Files to check: customers/customer_handler.py, rigel_core.py Fix required: Confirm refund reverses the deposit posting correctly. The Liability decreases and Cash decreases by the refund amount.
☐	CUS-014	Customers	Pending	Test ID: CUS-014 Module: Customers Expected behaviour: All customer-related graphs and KPI dashboards update correctly after each transaction is posted. No manual refresh required. Current behaviour: Not yet tested.

☐	Test ID	Module	Status	Kilo Code Instruction
				Files to check: reporting/dashboard.py, customers/customer_handler.py Fix required: Confirm self.refresh_dashboard() is called at the end of all customer post() methods.

5. Kilo Code Instructions — Directors Module

Source files: directors/director_handler.py, directors/masterfile.py, rigel_core.py, reporting/*.py
 This module handles: Director Dividends (Pay Dividend) + Director Loans (Loan by Director / Loan to Director).
 Loan repayments are in the Loans module — refer to RIGEL_Kilo_Code_Fix_Instructions.docx v1.

☐	Test ID	Module	Status	Kilo Code Instruction
☐	DIR-001	Directors	Pending	Test ID: DIR-001 Module: Directors Expected behaviour: Only grey-shaded cells are editable on the Director Transactions page. All other cells are locked. Current behaviour: Not yet tested. Files to check: directors/director_handler.py Fix required: Confirm cell protection. Grey cells editable; all others locked silently.
☐	DIR-002	Directors	Pending	Test ID: DIR-002 Module: Directors Expected behaviour: 'Pay Dividend' is available and selectable from the Nature of Transaction dropdown. Current behaviour: Not yet tested. Files to check: directors/director_handler.py Fix required: Confirm 'Pay Dividend' appears in the dropdown and enables dividend entry fields on selection.
☐	DIR-003	Directors	Pending	Test ID: DIR-003 Module: Directors Expected behaviour: Director Dividends post to View Transactions with correct columns: Date, Code, Director Name, Gross Dividend, Dividends Tax (20%), Net Dividend (80%), Category.

☐	Test ID	Module	Status	Kilo Code Instruction
				Current behaviour: Not yet tested. Files to check: directors/director_handler.py Fix required: Confirm post() splits the gross dividend into 80% net dividend and 20% dividends tax and records both in View Transactions.
☐	DIR-004	Directors	Pending	Test ID: DIR-004 Module: Directors Expected behaviour: A unique transaction code is auto-generated for each Director transaction (e.g., DIR-2026-0001). No duplicates. Current behaviour: Not yet tested. Files to check: directors/director_handler.py Fix required: Confirm unique code generation with a uniqueness check.
☐	DIR-005	Directors	Pending	Test ID: DIR-005 Module: Directors Expected behaviour: Dividend posting to TB: - Dr Dividends Declared (Equity / Retained Earnings reduction) — 80% of gross - Dr Dividends Tax (SARS Withholding Tax Payable — Liability) — 20% of gross - Cr Cash & Cash Equivalents — gross amount TB balances. Current behaviour: Not yet tested. Files to check: directors/director_handler.py, rigel_core.py, reporting/trial_balance.py Fix required: a. Confirm gross amount = net dividend + dividends tax (80% + 20% = 100%). b. Confirm three TB legs post: Dr Dividends Declared, Dr Dividends Tax Payable, Cr Cash. c. Confirm TB balances after posting.
☐	DIR-006	Directors	Pending	Test ID: DIR-006 Module: Directors Expected behaviour: Dividends Declared posts correctly to the Income Statement (or Equity Statement if applicable per RIGEL IS structure). Current behaviour: Not yet tested. Files to check: directors/director_handler.py, reporting/income_statement.py Fix required: Confirm Dividends Declared appears in the correct IS section. In many IFRS-aligned IS formats, dividends

☐	Test ID	Module	Status	Kilo Code Instruction
				appear in the Statement of Changes in Equity, not the IS. Confirm RIGEL's design choice and implement accordingly.
☐	DIR-007	Directors	Pending	Test ID: DIR-007 Module: Directors Expected behaviour: After dividend posting, BS reflects: - Cash & Cash Equivalents decreases by gross amount - Retained Earnings decreases (via Dividends Declared) - Dividends Tax Payable (Liability) decreases when paid to SARS Current behaviour: Not yet tested. Files to check: reporting/balance_sheet.py Fix required: Confirm BS shows all three effects correctly after a dividend posting.
☐	DIR-008	Directors	Pending	Test ID: DIR-008 Module: Directors Expected behaviour: Dividends Tax amount posts correctly in AFS Note 6 (Taxation), showing gross, withholding tax, and net split. Current behaviour: Not yet tested. Files to check: reporting/afs_notes.py Fix required: Confirm AFS Note 6 reads Dividends Tax Payable from the GL/data store and displays the correct gross/withholding/net split.
☐	DIR-009	Directors	Deferred	Test ID: DIR-009 Module: Directors Expected behaviour: Dividend cash outflow appears correctly in Cash Flows from Financing Activities in the CFS. Status: DEFERRED — CFS module not yet built. Fix required: None at this stage. When CFS is built, ensure dividends paid appear as financing outflows.
☐	DIR-010	Directors	Pending	Test ID: DIR-010 Module: Directors Expected behaviour: All Director Dividend transactions post to the GL in the correct debit/credit columns. Current behaviour: Not yet tested.

☐	Test ID	Module	Status	Kilo Code Instruction
				Files to check: rigel_core.py Fix required: Trace a sample dividend to the GL. Confirm Dr Dividends Declared, Dr Dividends Tax, Cr Cash all appear with correct values.
☐	DIR-011	Directors	Pending	Test ID: DIR-011 Module: Directors — Director Loans Expected behaviour: 'Loan by Director' (director lending to company) posts correctly: - Dr Cash & Cash Equivalents - Cr Loans from Directors (Non-Current or Current Liability per classification) View Transactions, TB, and BS all update correctly. Current behaviour: Not yet tested. Files to check: directors/director_handler.py, rigel_core.py Fix required: a. Confirm the 'Loan by Director' category triggers the correct double-entry. b. Confirm loan classification (Current/Non-Current) is applied correctly to BS disclosure. c. Confirm TB and BS both update.
☐	DIR-012	Directors	Pending	Test ID: DIR-012 Module: Directors — Director Loans Expected behaviour: Loan by Director amount posts correctly in AFS Note 2 (Loans from Directors) with outstanding balance, interest rate (if applicable), and repayment terms. Current behaviour: Not yet tested. Files to check: reporting/afs_notes.py Fix required: Confirm AFS Note 2 reads from the correct GL account. Outstanding balance, interest rate, and terms must all display correctly.
☐	DIR-013	Directors	Deferred	Test ID: DIR-013 Module: Directors — Director Loans Expected behaviour: Loan receipt from Director appears in Cash Flows from Financing Activities in the CFS (cash inflow). Status: DEFERRED — CFS module not yet built. Fix required: None at this stage.
☐	DIR-014	Directors	Pending	Test ID: DIR-014 Module: Directors — Director Loans

☐	Test ID	Module	Status	Kilo Code Instruction
				Expected behaviour: 'Loan to Director' (company lending to director) posts correctly: - Dr Loans to Directors (Non-Current or Current Asset per classification) - Cr Cash & Cash Equivalents View Transactions, TB, and BS all update. Current behaviour: Not yet tested. Files to check: directors/director_handler.py, rigel_core.py Fix required: - Confirm the 'Loan to Director' category triggers the correct double-entry. - Confirm Asset classification and BS disclosure. - Confirm CCE decreases cumulatively (shared fix: rigel_core.py update_cce()).
☐	DIR-015	Directors	Pending	Test ID: DIR-015 Module: Directors — Director Loans Expected behaviour: Loan to Director posts correctly in AFS Note 2 (Loans to Directors) with outstanding balance, interest, and repayment terms. Current behaviour: Not yet tested. Files to check: reporting/afs_notes.py Fix required: Confirm AFS Note 2 has a separate Loans to Directors section (Asset side). Outstanding balance and terms must display correctly.
☐	DIR-016	Directors	Pending	Test ID: DIR-016 Module: Directors — Masterfile Expected behaviour: Loan transactions post to the Director Masterfile against the correct director in the correct month with the correct plus/minus effect on the outstanding loan balance. Current behaviour: Not yet tested. Files to check: directors/masterfile.py Fix required: Confirm Masterfile tracks outstanding loan balances per director per month. Loan by Director = plus effect; Loan to Director = minus effect (from the company's perspective).
☐	DIR-017	Directors	Pending	Test ID: DIR-017 Module: Directors — Graphs Expected behaviour: All director-related graphs and KPI dashboards update correctly after each transaction. No manual refresh required.

☐	Test ID	Module	Status	Kilo Code Instruction
				Current behaviour: Not yet tested. Files to check: reporting/dashboard.py, directors/director_handler.py Fix required: Confirm self.refresh_dashboard() is called at the end of all director post() methods.

6. Kilo Code Instructions — Employees Module

Source files: employees/payroll_handler.py, employees/masterfile.py, rigel_core.py, reporting/*.py

☐	Test ID	Module	Status	Kilo Code Instruction
☐	EMP-001	Employees	Pending	Test ID: EMP-001 Module: Employees Expected behaviour: Only grey-shaded cells are editable on the Employee Transactions page. All other cells are locked. Current behaviour: Not yet tested. Files to check: employees/payroll_handler.py Fix required: Confirm cell protection. Grey cells editable; all others locked silently.
☐	EMP-002	Employees	Pending	Test ID: EMP-002 Module: Employees Expected behaviour: Salary and related transactions post correctly to: - View Transactions (all columns: Date, Code, Employee, Gross Salary, Deductions, Net Pay) - TB: Dr Salaries & Wages (IS expense) / Cr Cash & Cash Equivalents (net pay) / Cr Statutory Liabilities (PAYE/UIF/SDL) - IS: Salaries & Wages appears under Operating Expenses - BS: Cash decreases by net pay; Statutory Liabilities increase by deductions - GL: Correct debit/credit columns Current behaviour: Not yet tested. Files to check: employees/payroll_handler.py, rigel_core.py, reporting/*.py Fix required: - Confirm gross salary is split: net pay (cash) + PAYE + UIF + SDL. - Confirm all posting legs fire correctly. - Confirm IS reflects gross salary (Dr Salaries & Wages = gross), not just net pay.

☐	Test ID	Module	Status	Kilo Code Instruction
☐	EMP-003	Employees	Pending	Test ID: EMP-003 Module: Employees Expected behaviour: Statutory deductions (PAYE, UIF, SDL) are calculated correctly from gross salary and post to correct liability accounts: - PAYE Payable (Liability) - UIF Payable (Liability) - SDL Payable (Liability) Employee net pay = gross salary minus all three deductions. Current behaviour: Not yet tested. Files to check: employees/payroll_handler.py Fix required: a. Confirm PAYE calculation uses correct SARS tax tables for the employee's tax bracket. b. UIF = 1% employee + 1% employer (confirm which legs post here). c. SDL = 1% of leviable amount (confirm calculation). d. Net pay = Gross - PAYE - UIF employee contribution. e. All three liabilities must appear in BS until paid to SARS.
☐	EMP-004	Employees	Pending	Test ID: EMP-004 Module: Employees — Masterfile Expected behaviour: Employee records can be created and updated with all required fields: name, ID number, tax number, bank account, salary details, tax status. Records link correctly to payroll transactions. Current behaviour: Not yet tested. Files to check: employees/masterfile.py Fix required: a. Confirm all required fields are present in the employee creation form. b. Mandatory field validation before saving. c. Employee code must link to payroll transaction records.
☐	EMP-005	Employees	Pending	Test ID: EMP-005 Module: Employees Expected behaviour: The full payroll process (gross salary input → deduction calculation → journal entries) updates all financial statements accurately. IS: gross salary in Salaries & Wages. BS: net cash outflow; statutory liabilities. CFS: salary payments in operating activities. Current behaviour: Not yet tested.

☐	Test ID	Module	Status	Kilo Code Instruction
				Files to check: employees/payroll_handler.py, reporting/*.py Fix required: Run a full end-to-end payroll cycle. Confirm IS, BS, TB, and GL all reflect the correct figures after a complete payroll run.
☐	EMP-006	Employees	Pending	Test ID: EMP-006 Module: Employees — Graphs Expected behaviour: Employee-related graphs and dashboards (payroll summary, headcount, cost breakdown) update correctly after payroll postings. Current behaviour: Not yet tested. Files to check: reporting/dashboard.py, employees/payroll_handler.py Fix required: Confirm self.refresh_dashboard() is called at the end of payroll post() methods.

7. Kilo Code Instructions — Inventories Module

Source files: inventories/inventory_handler.py, inventories/masterfile.py, rigel_core.py, reporting/*.py
 Note: INVMOD- prefix used here to distinguish from the INV- prefix in the Suppliers module (prior grid).

☐	Test ID	Module	Status	Kilo Code Instruction
☐	INVMOD-001	Inventories	Pending	Test ID: INVMOD-001 Module: Inventories Expected behaviour: Grey-shaded cells are editable on the Inventory Transactions page. All inventory categories (Stock Receipt, Stock Issue, Adjustment) are selectable from the category dropdown. Current behaviour: Not yet tested. Files to check: inventories/inventory_handler.py Fix required: Confirm cell protection and dropdown categories. All three transaction types must be selectable.
☐	INVMOD-002	Inventories	Pending	Test ID: INVMOD-002 Module: Inventories Expected behaviour: Stock receipt (purchase) posts correctly: - Dr Inventory (Current Asset) — net cost

☐	Test ID	Module	Status	Kilo Code Instruction
				- Cr Cash OR Cr Trade Payables — gross or net depending on payment method - Dr VAT Input (if applicable) TB and BS update correctly. Current behaviour: Not yet tested. Files to check: inventories/inventory_handler.py, rigel_core.py Fix required: Confirm all posting legs fire. Confirm CCE or Trade Payables updates correctly based on payment method selected.
☐	INVMOD-003	Inventories	Pending	Test ID: INVMOD-003 Module: Inventories Expected behaviour: When inventory is issued/sold, COGS is triggered: - Dr Cost of Goods Sold (IS expense) - Cr Inventory (BS Current Asset decreases) IS reflects COGS correctly. Inventory balance decreases by cost of items sold. Current behaviour: Not yet tested. Files to check: inventories/inventory_handler.py, reporting/income_statement.py Fix required: - Confirm COGS is calculated as: quantity sold × average cost (or FIFO/LIFO per RIGEL design). - Confirm Dr COGS and Cr Inventory both post. - Confirm IS COGS line updates.
☐	INVMOD-004	Inventories	Pending	Test ID: INVMOD-004 Module: Inventories Expected behaviour: Stock adjustments (write-offs, count variances) post correctly: - Dr Inventory Write-Off / Adjustment (IS expense or other income/expense) - Cr Inventory (BS Current Asset decreases) Adjustment appears in View Transactions and GL. Current behaviour: Not yet tested. Files to check: inventories/inventory_handler.py Fix required: Confirm adjustment posting logic. Write-offs must reduce Inventory and create an IS expense. Count variances may increase or decrease Inventory.
☐	INVMOD-005	Inventories	Pending	Test ID: INVMOD-005 Module: Inventories — Masterfile Expected behaviour:

☐	Test ID	Module	Status	Kilo Code Instruction
				Inventory items can be created with all required fields: item code, description, cost price, selling price, quantity on hand, location, unit of measure. Records link correctly to transaction forms. Current behaviour: Not yet tested. Files to check: inventories/masterfile.py Fix required: Confirm all fields are present in the item creation form. Mandatory field validation. Item code must be unique.
☐	INVMOD-006	Inventories	Pending	Test ID: INVMOD-006 Module: Inventories Expected behaviour: Inventory balance is accurately reflected in TB and BS under Current Assets. Opening + Receipts – Issues – Write-Offs = Closing Balance on BS. Current behaviour: Not yet tested. Files to check: reporting/trial_balance.py, reporting/balance_sheet.py Fix required: After a series of stock receipts and issues, verify the closing inventory balance in TB and BS matches the expected calculation.
☐	INVMOD-007	Inventories	Pending	Test ID: INVMOD-007 Module: Inventories Expected behaviour: COGS appears correctly in IS when inventory is sold. IS is not affected by stock receipts alone (receipts are capitalised to BS, not IS). Current behaviour: Not yet tested. Files to check: reporting/income_statement.py Fix required: Confirm IS only shows COGS when inventory is issued/sold. Receipts must not appear in IS.
☐	INVMOD-008	Inventories	Deferred	Test ID: INVMOD-008 Module: Inventories Expected behaviour: Inventory movements (purchases and COGS) are accounted for in the CFS under Operating Activities (changes in working capital — Inventory movement note). Status: DEFERRED — CFS module not yet built. Fix required: None at this stage. When CFS is built, include inventory movement in the working capital note.
☐	INVMOD-	Inventories	Pending	Test ID: INVMOD-009 Module: Inventories — Graphs

☐	Test ID	Module	Status	Kilo Code Instruction
	009			Expected behaviour: Stock levels, inventory turnover, and WC Dashboard graphs update correctly after each inventory transaction. Current behaviour: Not yet tested. Files to check: reporting/dashboard.py, inventories/inventory_handler.py Fix required: Confirm self.refresh_dashboard() and self.refresh_wc_dashboard() are called at end of all inventory post() methods.

8. Kilo Code Instructions — Assets Module

Source files: assets/asset_handler.py, rigel_core.py, reporting/afs_notes.py, reporting/balance_sheet.py
CCE cumulative fix (rigel_core.py) is required for AST-004. Apply shared fix first.

☐	Test ID	Module	Status	Kilo Code Instruction
☐	AST-001	Assets	Pending	Test ID: AST-001 Module: Assets Expected behaviour: Only grey-shaded cells are editable on the Asset Transactions page. All other cells are locked. Current behaviour: Not yet tested. Files to check: assets/asset_handler.py Fix required: Confirm cell protection. Grey cells editable; all others locked silently.
☐	AST-002	Assets	Pending	Test ID: AST-002 Module: Assets Expected behaviour: All five Asset Classes (Buildings, Vehicles, Furniture, Computer Equipment, Fittings) are available and selectable from the category dropdown. Each class posts to the correct asset account in View Transactions and GL. Current behaviour: Not yet tested. Files to check: assets/asset_handler.py Fix required: Confirm all five classes appear in the dropdown. Each class must map to its own GL account (e.g., Buildings

☐	Test ID	Module	Status	Kilo Code Instruction
				at Cost, Vehicles at Cost).
☐	AST-003	Assets	Pending	Test ID: AST-003 Module: Assets Expected behaviour: A unique transaction code is auto-generated for each asset transaction (e.g., AST-2026-0001). No duplicates. Current behaviour: Not yet tested. Files to check: assets/asset_handler.py Fix required: Confirm unique code generation with a uniqueness check.
☐	AST-004	Assets	Pending	Test ID: AST-004 Module: Assets Expected behaviour: All Asset Classes and SARS VAT Input post correctly to TB and BS: - PPE (Non-Current Asset) increases by net cost (per asset class) - VAT Input (Current Asset) increases by VAT portion - Cash & Cash Equivalents decreases by gross amount (cumulative) TB balances. Current behaviour: Not yet tested. Files to check: assets/asset_handler.py, rigel_core.py Fix required: a. Confirm all three legs post. b. Confirm CCE update is CUMULATIVE (shared fix: rigel_core.py update_cce()). c. Confirm each asset class posts to its own PPE account (not a single combined account).
☐	AST-005	Assets	Pending	Test ID: AST-005 Module: Assets Expected behaviour: Each Asset Class posts to the correct class line in AFS Note 1 (PPE). VAT is excluded from Note 1 cost figure — net cost only in Note 1. Current behaviour: Not yet tested. Files to check: reporting/afs_notes.py Fix required: Confirm Note 1 has a row per Asset Class. Cost column = net cost only (no VAT). Confirm GL/data store provides net cost correctly.
☐	AST-006	Assets	Pending	Test ID: AST-006 Module: Assets

☐	Test ID	Module	Status	Kilo Code Instruction
				Expected behaviour: VAT Input on asset purchases posts correctly to AFS Note 6 (VAT / SARS). The VAT amount is traceable from the transaction to Note 6. Current behaviour: Not yet tested. Files to check: reporting/afs_notes.py Fix required: Confirm Note 6 reads VAT Input from the correct GL account. The sum of all asset VAT inputs must match the VAT Input balance in the TB.
☐	AST-007	Assets	Pending	Test ID: AST-007 Module: Assets Expected behaviour: Asset purchases post to the Additions line under Cash Flows from Investing Activities in the CFS. The gross cash amount (including VAT) appears as an investing outflow. Current behaviour: Not yet tested — pending CFS build. Files to check: reporting/cash_flow_statement.py (to be created) Fix required: When CFS is built, ensure asset cash purchases are classified as investing outflows. Gross amount (including VAT) is the correct cash figure for the CFS.
☐	AST-008	Assets	Pending	Test ID: AST-008 Module: Assets Expected behaviour: All asset transactions post to the GL in the correct debit/credit columns with correct date, code, description, and amount. Current behaviour: Not yet tested. Files to check: rigel_core.py Fix required: Trace a sample asset purchase through the GL. Confirm Dr PPE (class-specific), Dr VAT Input, Cr Cash all appear correctly.
☐	AST-009	Assets	Pending	Test ID: AST-009 Module: Assets Expected behaviour: Asset disposals post correctly: - Asset removed at carrying value (cost less accumulated depreciation) - Proceeds received: Dr Cash - Gain or Loss on disposal recognised in IS (Other Income or Other Loss) View Transactions, TB, and BS all update. Current behaviour: Not yet tested.

☐	Test ID	Module	Status	Kilo Code Instruction
				Files to check: assets/asset_handler.py, rigel_core.py, reporting/income_statement.py Fix required: - Confirm disposal removes the asset at carrying value (not cost). - Confirm gain/loss calculation: proceeds minus carrying value. - Confirm Gain/Loss posts to IS under Other Income/Loss. - Confirm BS removes the asset and reflects the cash proceeds.
☐	AST-010	Assets	Pending	Test ID: AST-010 Module: Assets Expected behaviour: Disposals are correctly reflected in: - AFS Note 1 (PPE — Disposals column, showing cost and accumulated depreciation removed) - CFS Investing Activities (proceeds from disposal as an inflow) Current behaviour: Not yet tested — CFS pending. Files to check: reporting/afs_notes.py, reporting/cash_flow_statement.py Fix required: Confirm Note 1 Disposals column is populated. When CFS is built, ensure disposal proceeds appear as investing inflows.
☐	AST-011	Assets	Pending	Test ID: AST-011 Module: Assets — Graphs Expected behaviour: All asset-related graphs (capex trend, asset class breakdown, net book value over time) update correctly after each asset transaction. Current behaviour: Not yet tested. Files to check: reporting/dashboard.py, assets/asset_handler.py Fix required: Confirm self.refresh_dashboard() is called at end of all asset post() methods.

9. Kilo Code Instructions — Projects Module

Source files: [projects/project_handler.py](#), [reporting/dashboard.py](#)

Project allocation is a cross-module feature: it requires changes to Expenses, Customers, and Assets posting forms as well.

☐	Test ID	Module	Status	Kilo Code Instruction
☐	PRJ-001	Projects	Pending	Test ID: PRJ-001 Module: Projects Expected behaviour: Projects can be created with: project code, project name, budget, status (Active/Inactive). The Project Masterfile displays all projects with current status and budget. Current behaviour: Not yet tested. Files to check: projects/project_handler.py Fix required: a. Confirm project creation form has all four fields. b. Mandatory field validation before saving. c. Project code must be unique. d. Masterfile list displays all projects with status and budget visible.
☐	PRJ-002	Projects	Pending	Test ID: PRJ-002 Module: Projects Expected behaviour: Expenses, revenue, and asset purchases can be allocated to specific projects at the point of posting in the relevant module. The allocation field appears when posting a transaction in Expenses, Customers, Assets, etc. Current behaviour: Not yet tested. Files to check: projects/project_handler.py, suppliers/expense_handler.py, customers/customer_handler.py, assets/asset_handler.py Fix required: a. Add a Project Code dropdown to all relevant transaction forms. b. On post: save the project allocation alongside the transaction record. c. Project allocation is optional — transactions without a project code post normally.
☐	PRJ-003	Projects	Pending	Test ID: PRJ-003 Module: Projects — Reporting Expected behaviour: Project-wise Profit & Loss, Budget vs Actual comparison, and WIP balances are visible and accurate in the Project reporting screen.

☐	Test ID	Module	Status	Kilo Code Instruction
				Figures reconcile to the main financial statements. Current behaviour: Not yet tested. Files to check: projects/project_handler.py, reporting/dashboard.py Fix required: - Confirm the Project P&L reads all transactions allocated to each project. - Budget vs Actual = Budget Amount vs Sum of actual transactions for the project. - WIP = sum of costs allocated to projects not yet completed. - Total project revenue and costs must reconcile to the main IS.
☐	PRJ-004	Projects	Pending	Test ID: PRJ-004 Module: Projects Expected behaviour: Project allocations roll up correctly to GL, IS, and BS. A transaction allocated to a project must also appear in the main financials as if it were not project-coded. Project coding is an additional dimension — not a replacement for standard posting. Current behaviour: Not yet tested. Files to check: projects/project_handler.py, rigel_core.py Fix required: Confirm that project-allocated transactions still post normally to the GL, TB, IS, and BS. The project code is a tag/dimension only — it does not change the accounting treatment.
☐	PRJ-005	Projects	Pending	Test ID: PRJ-005 Module: Projects — Graphs Expected behaviour: Project-related dashboards and graphs (project spend vs budget, profitability by project) update correctly after each project-allocated transaction. Current behaviour: Not yet tested. Files to check: reporting/dashboard.py, projects/project_handler.py Fix required: Confirm dashboard refresh is called after project-allocated postings.

10. Kilo Code Instructions — Adjustments Module

Source files: adjustments/adjustment_handler.py, audit/audit_trail.py, rigel_core.py, reporting/*.py

ADJ-005 (Audit Trail) requires audit/audit_trail.py to be built. See SMF-008 in v1 instructions for the shared audit trail build specification.

☐	Test ID	Module	Status	Kilo Code Instruction
☐	ADJ-001	Adjustments	Pending	Test ID: ADJ-001 Module: Adjustments Expected behaviour: Grey-shaded cells are editable on the Adjustment entry page. 'Journal Adjustment' category is available and selectable. The form accepts both debit and credit entry fields. Current behaviour: Not yet tested. Files to check: adjustments/adjustment_handler.py Fix required: Confirm cell protection and category dropdown. Both debit and credit amount fields must be present and editable.
☐	ADJ-002	Adjustments	Pending	Test ID: ADJ-002 Module: Adjustments Expected behaviour: Adjusting journal entries post correctly to: - View Transactions (debit account, credit account, amount, date, description) - GL (correct debit/credit columns) - TB (all affected accounts updated) The entry must balance (total debits = total credits) before posting is permitted. Current behaviour: Not yet tested. Files to check: adjustments/adjustment_handler.py, rigel_core.py Fix required: a. Confirm balance check before post(): if Dr total ≠ Cr total, block the post and display an error. b. Confirm all three posting destinations update correctly.
☐	ADJ-003	Adjustments	Pending	Test ID: ADJ-003 Module: Adjustments Expected behaviour: Adjustments correctly affect IS, BS, and Retained Earnings depending on the accounts debited/credited. An adjustment to an income or expense account flows through the IS to Retained Earnings in the BS. Current behaviour: Not yet tested.

☐	Test ID	Module	Status	Kilo Code Instruction
				Files to check: adjustments/adjustment_handler.py, reporting/income_statement.py, reporting/balance_sheet.py Fix required: - Confirm IS updates when an income/expense account is debited or credited in an adjustment. - Confirm Retained Earnings in BS updates to reflect the IS impact. - Confirm BS-only adjustments (e.g., reclassification between asset accounts) do not affect IS.
☐	ADJ-004	Adjustments	Pending	Test ID: ADJ-004 Module: Adjustments Expected behaviour: If reversing journals are supported: the reversal posts in the following period without duplication. The original entry and its reversal are linked and traceable in the GL. Current behaviour: Not yet tested. Files to check: adjustments/adjustment_handler.py Fix required: - Determine if reversing journals are in scope for this release. - If yes: confirm reversal creates the exact opposite journal entry in the next period. - Confirm original and reversal are linked (e.g., reversal_of field in the transaction record). - Confirm no duplication — reversing a reversal is not permitted.
☐	ADJ-005	Adjustments	Pending	Test ID: ADJ-005 Module: Adjustments Expected behaviour: All adjustment journal entries are logged in the Audit Trail with: - User who made the adjustment - Date and time - Reason for adjustment - Debit account, Credit account, Amount - Before and after values No adjustment can be made without an audit trail entry. Current behaviour: Not yet tested. Files to check: adjustments/adjustment_handler.py, audit/audit_trail.py Fix required: - Confirm audit_trail.log() is called for every adjustment post. - The reason field must be mandatory — block post if reason is empty. - Before/after values must be captured for all affected account balances.
☐	ADJ-006	Adjustments	Pending	Test ID: ADJ-006 Module: Adjustments — Graphs

☐	Test ID	Module	Status	Kilo Code Instruction
				Expected behaviour: Adjustments are reflected correctly in dashboards and graphs after posting. No graph should show pre-adjustment figures after an adjustment has been successfully posted. Current behaviour: Not yet tested. Files to check: reporting/dashboard.py, adjustments/adjustment_handler.py Fix required: Confirm self.refresh_dashboard() is called at end of all adjustment post() methods.

— End of Document —
